

eiki digital systems express digital signage

.advancedMethod and EIKI Digital Systems have combined forces to create the digital signage system everyone has wanted. Whether you have one machine or 1,000 express is designed to handle it, without installing software, right out of the box.

Features

- **Software.** Express comes complete with web-based software that includes drawing, editing and media integration tools.
- **Server based.** All of your files are available anywhere once you save them. Edit your files in your pajamas in Belize.
- **Express comes with hundreds of industry specific templates, with more each month.** We support all standard monitor resolutions.
- **Robust player.** Our Express Media Player has more than power to tackle the difficult graphic scenarios.

.advancedMethod software has taken its deep digital signage experience to create an all-inclusive digital signage system. Express includes everything you need, all the hardware, all the software, templates and even "live" content. Express is designed to dramatically simplify the deployment of digital signage, whether a single sign or a giant network.

Our expertise is now yours.

INTERNET SECURITY

256-bit encryption, the highest legally allowed, is used communicating all data between player and servers. Your data will not be hacked. Period.

NETWORKS, FIREWALLS

Express uses pull-forward technology. This means you rarely need to configure networks to let it out to get content, your player gets out of the network, finds what it needs and uploads it on its own.

SECURE OS

Our operating system, .aM.OS, is a variation of Linux. Light, fast, small and locked-down.

Features & Specifications

TECHNICAL SUPPORT

Your dealer is trained in installation and use of Express. There is also extensive online support and .advancedMethod monitors the health of your system. Your back is covered.

MAXIMUM UPTIME

Express uses "pull-forward" technology. All content is downloaded to each player before it plays, no streaming. This way, when your internet connection has a disconnect your player will keep playing, resuming getting new content when the connection goes back up. No more blank screens!

TURNKEY SOLUTIONS

Installation is simple. Connect the player to power, connect it to your display device, plug it into an Ethernet outlet (or connect it with a cellular device) and you are good to go. To begin modifying your display simply go to www.myexpresssign.com and login with the password provided by your dealer.
