

Vidcaster Stream Solutions are designed using NewTek TriCaster technology. The Vidcaster Stream family of products can be customized to fit your application and budget. Contact AVT to discuss your design today!

The **Stream Express** is a portable, cost effective live production workhorse. Its lightweight design makes it easy to transport, setup and teardown. The Stream Express can switch between six cameras with real-time chroma keying, live titling, audio mixing, live video streaming and more.

The **Stream Express HD** uses the same footprint as the Express, but is upgraded to a 3 input HD switcher with real-time chroma keying, live titling, audio mixing, live video streaming and incredible Virtual set technology.

The **Stream Elite HD** uses a full size hard shipping case on castors. Its unique design is our most popular style for full mobile video production capability. The front case lid doubles as a table and all monitoring is built into one case. It features full HD integration using a 3 input HD switcher with real-time chroma keying, live titling, audio mixing, live video streaming and incredible Virtual set technology.

The **Stream Ultimate HD** has the same profile as the Elite HD, however it is upgraded to the TriCaster TCXD850 which is an 8 input HD Ultimate video production tool. The Stream Ultimate HD can switch between eight cameras with real-time chroma keying, live titling, audio mixing, live video streaming and incredible Virtual set technology.
