

# BENSALEM TOWNSHIP

Upgrading Township Council Chambers

## CASE STUDY

### OBJECTIVE

Bensalem Township in Bucks County, Pennsylvania needed to upgrade their Township Council Chambers to provide sound and video reinforcements and multimedia support within the room as well as improve the quality of the recording to enhance public meetings and broadcasts.

### SOLUTION

After working with AVT for over a decade on other projects ranging from digital signage, public access TV, and video production systems, Deron Miller, Bensalem Township's Production and Media Manager knew he could turn to AVT to get the completely integrated audio visual system at the budget he needed. AVT designed a system around two, Sony 5000 lumen projectors aimed at two Da-Lite electric screens at the front and rear of the space. Applied Video provided all training, as built, signal flow and elevation drawings after the project was completed and the system is covered under an AVT Service Block Contract.

"We are currently using this room for Township Trainings, Council Zoning Hearing Boards, Planning Commissioning Meetings and press conferences. As always, it was a pleasure to work with AVT on this project. We have been using them for over 10 years and have and would continue to recommend their services to any township looking to update their board room."

**DERON MILLER, PRODUCTION & MEDIA MANAGER**

### KEY PRODUCTS

- Sony WUXGA Projector
- Da-Lite Wall Mounted Electric System
- Extron Distribution & Control System
- Shure Conferencing System
- Da-Lite Presentation Lectern
- JBL Two-Way Line Array Column Speakers
